

## LogLogic Achieves Certificate of Networthiness for U.S. Army

### **National cybersecurity initiatives stress information protection and log management**

SAN JOSE, Calif. — June 18, 2009 — LogLogic®, today announced that its enterprise log management appliances, the LX and ST, have received a Certificate of Networthiness (CoN) for the Department of Defense (DoD) U.S. Army installations.

The CoN places LogLogic on the Army Authorised Products List/Army Valid CoN list and enables U.S. army commanders to use LogLogic's market leading log management and intelligence appliances for automated data collection, analysis and reporting.

"President Obama's cybersecurity initiatives demonstrate just how serious information protection is for our country," said Dominique Levin, VP of Marketing and Strategy at LogLogic. "Our Certificate of Networthiness will make it easier for the U.S. Army to utilise their logs and ensure their information is guarded from unlawful attack."

LogLogic's open log management solutions help businesses and governmental organisations save time and resources by automating log monitoring and reporting. Key features include in-depth forensic analysis, event correlation, and ease of deployment and support.

### **About LogLogic**

LogLogic® is the leader in log and security management solutions. Supported by more than 200 partners and trusted by more than 1,000 customers worldwide, LogLogic solutions provide visibility and control to any IT infrastructure so that organisations can significantly improve security, compliance and network performance. LogLogic's open log management platform enables customers to collect, search and store massive amounts of IT log data from a myriad list of devices and applications for a comprehensive fingerprint of past and current activity, through one convenient, easy-to-use web-based user console. LogLogic's business applications correlate user activities and event data in real-time for a uniquely integrated approach to security event management, database security management, security change management and compliance management, resulting in improved accountability and lower costs for organisations of all sizes.
